

Wanted to pass on the following reviewer comments:

---

Information Assurance Associates, Inc. (IA2):

There is sufficient evidence that IA2 has done a thorough job in mapping their courseware justifications with the required CNSS standards and elements. This is an excellent course specifically designed and customized to respond to all of the elements identified in CNSS 4012 and incorporates many other key aspects that are critical to assist Information System Security Managers (ISSMs) and Information Assurance Managers (IAMs). The specificity detail outlined in the justifications made this an easy task for the reviewer to validate the course content. The IA2 team could have easily summarized many of the elements but the specifics on exactly where to locate an item was terrific from a reviewer's perspective and the extra attention to detail was appreciated. Many team and individual exercises are cited and the problem sheets and progress checks are useful tools to verify student comprehension.

4012: Overall this is a wonderful submission and there is much evidence that the developers of this program have a complete and thorough understanding of the requirements and have translated these requirements into the relevant courseware for its students. Multiple coverage on many items were cited, exceeding the requirements, but does help ensure that key concepts or issues are reinforced throughout the material. There also appear to be some excellent topics discussed in the "Legal Statutes, Issues and Intrusion Forensic" section of the course that the reviewer would like to highlight. Overall the course content is superb.
